SMOKE + BUBBLES MACHINE

Smoke bubble machine, generates soap bubbles full of smoke.

Reference: ZZBUBBLE

Bubble Machine with Smoke

ZZBUBBLE generates bubbles filled with smoke with a characteristic effect. Excess fluid flows back into the container and does not dirty the surrounding area of the machine. Thanks to its innovative tank, the machine can also be installed in suspension. Its versatility allows it to be used for shows, parties, concerts, and events.

This impressive and spectacular machine creates a multitude of bubbles that release smoke when they burst. To make the effect even more spectacular, LED lights have been inserted on the front of the machine, illuminating the flow of bubbles, making it unique for an unprecedented show.
